- **FRC.Tools:** tools, photos, practice fields and grants for FRC teams
- **Audience Display:** live big-screen graphics driven by the FRC field system
- **FRC Radio Kiosk:** PoE power board with battery backup, designed in KiCad

VOLUNTEER EXPERIENCE

FIRST Robotics Competition

As a mentor I teach students design principles, physics, math, and programming concepts. I also help with hands-on activities: supervise student work and teach shop safety, assist students with solving problems, and support them at competitions.

I also volunteer at competitions in the US, Australia and New Zealand as a FIRST Technical Advisor Assistant. In this role my goal is to keep the competition on time by solving any technical issues that may arise. I also work with individual teams to troubleshoot their robot's issues and advise them on potential solutions to get them back on the field.
